

Made by Areus in Herrenberg:
Guaranteed delivery within 6 weeks

In our cutting-edge production facility, we prioritize cable assembly, the assembly of test and inspection equipment and electronic assemblies.

With automated manufacturing facilities dedicated to cable harness production, we stand out in the series production of small and medium quantities for engineering purposes and are able to respond quickly to new development statuses. Our customers benefit from our extensive stock of (Automotive) connectors, resulting in faster deliveries and shorter lead times.

It's this flexibility that our customers value - from conceptualization to engineering to production.

The long delivery times on the market for H-MTD components often present significant challenges, causing project delays. Therefore, we have expanded our cable harness production to include H-MTD cable harnesses.

We guarantee the delivery within 6 weeks after purchase order receipt - and that at cost-effective prices.
